Starting "Basic IGF Course" at Manila Training Facility

To ensure the safe and efficient operation of our IGF (International Code of Safety for Ships Using Gases or Other Low-Flashpoint Fuels) vessels, we have initiated an in-house Basic IGF course January 2024 with approval from the MARINA (Maritime Industry Authority) in the Philippines at our Manila Training Facility. Recognizing the paramount importance of well-trained human resources in the maritime industry, this initiative aims to equip our seafarers with the necessary skills for the responsible operation of IGF vessels.

Our state-of-the-art simulator training program stands as a cornerstone in our efforts. This program ensures that our seafarers attain a profound understanding and the required knowledge for operating IGF vessels, reinforcing our commitment to safety, efficiency, and environmental stewardship. We remain steadfast in our dedication to expanding our footprint in cleaner fuels and, in doing so, contributing to a greener and more sustainable future.
