Advancing Environmental Sustainability Through Solar Power

At our company, we regard environmental conservation as one of our key corporate responsibilities and are committed to promoting sustainable business operations with consideration for the environment.

As part of this commitment, our group company in the Philippines has taken a meaningful step toward reducing environmental impact and fostering a sustainable future by installing a solar power system at its Bacoor office.

Completed on October 8, 2025, the system utilizes renewable energy to help lower CO₂ emissions and reduce electricity costs. Covering a total area of 1,259 square meters, the solar panels offer a maximum generation capacity of 182.65 kW per hour, contributing to greater energy efficiency in daily operations.

We remain dedicated to environmentally responsible business practices and will continue striving to make a positive impact on both the local community and the global environment.
